

SYSTEM AND METHOD FOR AGGREGATING WEBSITE CONTENTS

ABSTRACT OF THE DISCLOSURE

A system for aggregating website content comprises an engine  
5 capable to compute source coordinates of at least one user-selected  
portion of at least one web page located on the network, compute  
placement coordinates for the at least one user-selected portion, and  
store the computed source coordinates, computed placement  
coordinates, and at least one web page identifier in a file in the memory  
10 device.
